CSCI 466/566   Assignment 8   Fall 2017
                                  100 points
                            html and forms in html

For this assignment you are to design and write a web page that uses
some of the basic html and form tags you will need for the php
assignments.
Your page must contain (in any order you wish)
   • Your name and section centered on the page (use 2 different
     header tags)
   • at least 2 other colors (other than black and white)
   • an ordered list of the classes you are currently taking
   • a form with
        • a drop down(options) list with those same classes
        • radio buttons with year in school choices (Freshman,
          Sophomore, Junior, Senior, Student-at-large, Graduate)
   • another form with
        • checkboxes for meal choices (vegetarian, gluten free,
          vegan, no nuts)
        • an input box for entering a name and two buttons (submit
          and cancel)
   • appropriate documentation in the html that contains your name,
     section, instructor name, TA name, Semester and due date

None of the form elements need to do any processing. You should
assume the TAs will be grading these using the browser Firefox, if
you test using some other browser, you must inform the TA which one
it was, otherwise if there are problems you will lose points.

Save your web page as assn8.html in your public_html sub-directory on
hopper. You can then access it via
students.cs.niu.edu/~yourZID/assn8.html. Make certain this link works
because that is how this assignment will be graded. In Blackboard,
you must put a link to this page, you will not need to hand in
anything else.
